

FAASTeam & Portland FSDO presents:

# **Can Your Airplane Really Perform?**

You have a pretty good sense of takeoff and landing distances required, but if the field is short do you know your airplane well enough to guarantee you can land and depart safely? Attend this workshop and calculate takeoff and landing distances required for your airplane, then compare your calculated values to actual distances measured on the runway. The results may be surprising!

**Directions:** From downtown Newport, proceed North on Route 10. The entrance to Parlin Field airport is on the West side of Route 10, about 2 miles North of town. From points North, take Exit 13 (Grantham) and proceed South on Route 10. Parlin Field airport is about 9 miles South of Exit 13.

**A message from the National FAASTeam Manager**

Over 10,150 AMTs earned an AMT Award last year. Will you, this year?  
Sign up for the FAA's safety services at [www.FAASafety.gov](http://www.FAASafety.gov)!
